

THREE WATER DIVERSION CASES

PURPOSE

Research the Internet and other sources surrounding ecosystems and human communities
Compare and contrast the problems and successes of various water diversions and describe possible remediations

INTRODUCTION

Humans have been diverting water for irrigation, flood control, and a constant drinking supply for thousands of years. When populations were small, the diversions were small. Over the last 150 years human populations have grown rapidly and our technical abilities have vastly improved. These two changes, worldwide, have led to many large-scale projects that have altered the environment of sizable regions. This investigation focuses on three major water diversions: the Salton Sea, Aral Sea, and the Colorado River.

PART I: The Salton Sea

1. Describe the location of the Salton Sea. What is the climate and geography of the area?
2. How did the Salton Sea form? Explain what role humans played.
3. What is the present condition of this body of water? How has it changed over the last 25 years? Why?

4. Describe several ways the Salton Sea has altered the ecosystem of the region. Explain the stability of that ecosystem. How is it changing over time?

5. Outline three environmental and three economic reasons the Salton Sea is important.

6. What steps are being taken to remediate the Salton Sea? What are the chances of success? Explain.

7. Compare the similarities and differences between the Salton Sea and Lake Chad in sub-Saharan Africa.

PART II: The Aral Sea

1. Find the location and other geographic information about the Aral Sea from a current atlas.

a. Which former Soviet republics border the Aral Sea?

b. Which rivers mainly supply the Aral Sea?

2. What government agency is responsible for the Aral Sea and its plight?

3. Why was the water supply to the Sea diverted?

4. What resources did the Aral Sea supply to the local inhabitants?

5. Describe three negative environmental effects of the fading of this sea.

6. Describe three economic impacts in the region because of the water diversion.

7. How is the situation of the Salton Sea similar to the Aral Sea? How is it different?

8. How would you describe this region today other than as a "sea"?

9. Explain five health effects on people related to the vanishing Aral Sea

10. How can the Aral Sea be realistically rehabilitated?

11. Compare the situation in Mono Lake in California with that of the Aral Sea.

a. How did the Mono Lake problem arise?

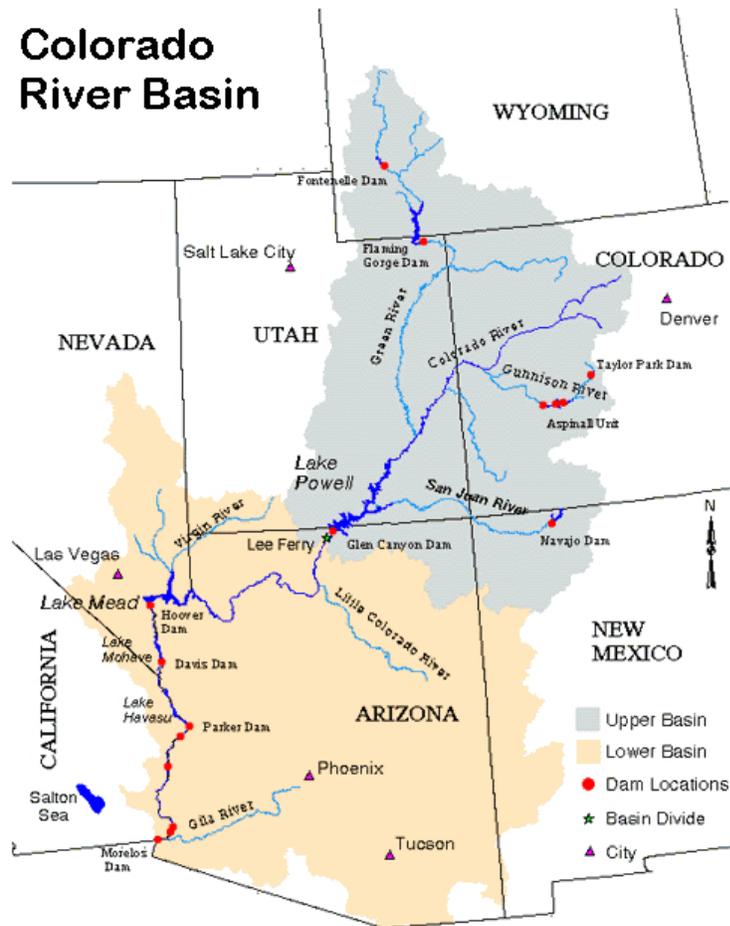

b. Describe three ways the problems of Mono Lake are similar to those of the Aral Sea.

c. Outline three ways the problems of Mono Lake differ.

d. Summarize the proposals and actions to remediate Mono Lake.

PART III: The Colorado River

The Colorado flows across five states and parts of Mexico.

1. Compare water diversion influences on the Colorado River with those on the Salton Sea and the Aral Sea. Describe three ways they are different.
2. Look at the figure above. Where is the source of the Colorado River? What are some of the main tributaries and their sources? What is the most important origin of the water in the Colorado River?
3. Who decides where the water in the river system goes? How is the resource divided between the various states in the watershed and beyond?

10. The Three Gorges Dam on the Yangtze River is very controversial.

a. Why is this dam being built?

b. Describe how this dam differs from dams on the Colorado River, such as the Glen Canyon Dam or Hoover Dam, with respect to:

- the disruption of human life
- impact on the environment
- archaeology
- local culture and natural beauty
- the individual states use the water? Who are the top five consumers of the water?
