

Carbon Monoxide

YAY!

Anthropogenic source

- Combustion of carbon containing fuels

Effects on environment

- Greenhouse gasses which link to climate change and global warming

Effects on humans

- Death, heart disease(moderate amount for a consecutive amount of time)

Economic effects

- Carbon monoxide detectors

Science behind it

- Binds hemoglobin and causes oxygen to leave sources
- Can be found naturally in the environment: volcanoes erupting, smoke of forest fires, natural gasses in coal mines, and even lightning

Primary or secondary?

- Primary- directly admitted from a process like gas in a vehicle
